SealFlex™

Nasal Masks

Complete line of
high quality,
ribbed cushion
nasal masks.

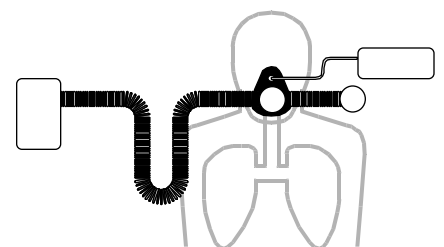

SealFlex nasal masks are ideal for use in emergency transport, critical care and home care.

The ribbed cushion design provides a consistent seal with minimal pressure being applied to the nose and face, reducing air leakage.

These nasal masks offer a raised bridge over the nose to insure patient comfort and ease of use by clinical technicians.

The omni-directional swivel adaptor has a feature to reduce rebreathing, and a quick release fitting to disconnect the mask from the circuit, when needed.

- Available with comfortable head pads, mask harness and omni-directional swivel adaptor
- Easy access pressure and O₂ ports
- 4 sizes
- Latex Free
- In clinical use for over 10 years
- Size differentiated by color for easy identification

SealFlex™ Nasal Masks

The most advanced technology in mask design brings affordability and comfort to CPAP therapy.

This high quality, anatomically contoured nasal mask provides an optimal seal with extremely low pressure because of its unique ribbed cushion design, enhancing patient comfort and tolerance.

Once the CPAP system is pressurized, the system itself, seals the mask from the inside, allowing the mask harness to be comfortably fitted to the patient. This "system sealing" advantage also enables the mask to easily conform to different shapes of faces.

- Low pressure "CPAP system sealing" ribbed cushion design
- Clear for optimal visibility
- Anatomically correct cushion shape minimizes air leakage
- High dome eliminates nasal trauma
- Omni-directional swivel adaptor for ease of use
- Optional accessories available
- Forehead foam spacer included with each mask
